

DU Re-Evaluation: Sampling scheme for testing pathway strategies under deep uncertainty

Notation

$\vec{\pi}_{ND}$ Original Pareto-optimal strategy

$\vec{\psi}_i$ A DU SOW sample

$\vec{x}_i$ Hydroclimatic realization sample

K Number of sampled strategy perturbations

M Number of sampled hydroclimatic realizations

N Number of sampled DU SOWs

$\vec{J}_i$ Performance of one strategy in one DU SOW

$\vec{s} = \begin{cases} \mathbf{1}, & \text{if satisfying thresholds met} \\ \mathbf{0}, & \text{otherwise} \end{cases}$

$\vec{\Lambda}_{ND}$ Robustness of a pathway strategy
